

911 Emergency Drive-Thru System

Overview

The Marsh Products 911 Emergency Drive-Thru System will keep your drive-thru operation open even when your existing drive-thru system is down. The inexpensive 911 system comes ready for easy hook up and is conveniently packaged for storage. Setup is completed in less than 10 minutes.

The 911 system is based on the industry standout Alpha Series Single Channel Audio System. The kit includes two main units: an indoor master station with countertop mounting and a weatherproof outdoor remote station with clear audio communication; audio cable and an air hose style vehicle detector.

Optional Footswitch

A sealed vinyl footswitch is available as an option for this system. This allows efficient, hands-free operation of the system during particularly busy periods. The footswitch is hermetically sealed and impervious to oil, water and grime.
