

853 Air Hose Switch Vehicle Detector Instructions

The **hose switch** is an instant type alert that produces a momentary switch closure as a vehicle passes over the **air hose**. The air pressure **hose switch** is packaged in a weather resistant metal housing that can be mounted to a flat surface. The **10-foot air hose** attaches to the **air switch enclosure** at one end, lays across the driving lane and fastens to a **hose anchor** at the other end. **100 feet of cable** is provided which connects directly to the back of the base station.

Although air hose detection is easy to install and low in cost, it should be used for low traffic applications because it is a momentary switch type and the audio must be switched "OFF" manually after communication is ended.

Package consists of:

- 1) 1 850 Hose Switch
- 2) 10 ft 390 Air Hose
- 3) 1 852 Hose Anchor
- 4) 100 ft 340 22Awg 1-pair Cable
